

Why choose the Linksys Wireless-G range expander

Are you trying to get more coverage out of your Wireless Network? Linksys offers several innovative solutions for expanding your coverage. The Linksys Wireless-G Range Expander is the easiest way to increase the effective coverage of your wireless network. It is the perfect solution for covering hard-to-reach areas in multi-story homes, large offices, warehouse environments, public spaces, wireless "Hot Spots" and outdoor venues.

How Does It Work?

Placing the range expander within range of your main access point or wireless router re-amplifies the signal and drives it to the remote wireless devices in reflective corners and hard-to-reach areas where coverage is spotty and cabling is not practical. Note: Speed on the other side of the range expander is cut in half.

What About Set Up?

Set up is easy. Simply plug in the range expander into a standard electrical outlet within range of your main access point or wireless router. By adjusting the direction of the antenna and pressing the auto-configuration button, it detects the available access point or router and configures itself with the network.

Compatible Products

Routers	Access Points	Wireless-G Adapters
WRT54G	WAP54G	
WRT54GS (up to 35% faster!)		WMP54G
		WUSB54G

Why Use the Range Expander?

- Easiest way to expand your wireless network's coverage
- Extends your wireless signal into large, hard-to-reach areas
- Saves wiring costs
- Compatible with both Wireless-G and Wireless-B networking clients
- Three year limited warranty
