

## **Sophos email appliances plug in protection**

### **Sophos Email Appliances - Plug-and-protect defense against spam, phishing, malware and data leakage**

Sophos Email Appliances proactively protect against inbound and outbound email threats. A remotely monitored managed appliance platform and intuitive management console greatly reduce administrative effort, simplifying security and policy enforcement.

- Protects against spam, viruses, spyware, and other malware
- Monitors email content and prevents leakage of confidential information
- Easily fits into any network infrastructure
- "Set-and-forget" protection is simple and reliable
- Eliminates administrative overhead
- Choice of two solutions to handle up to 80,000 messages per hour

### **Proactive anti-spam protection**

Sophos Email Appliances eliminate more than 99% of spam with a range of anti-spam technologies including Sender Genotype detection, reputation filtering, heuristics, attachment fingerprinting and more. SXL, the real-time anti-spam intelligence service powered by SophosLabs™, enables instant protection against fast-moving spam campaigns.

### **Stop viruses, Trojans, spyware and other malware**

Sophos's award-winning anti-virus engine detects all types of malware in a single, high-speed scan. Every Sophos appliance is updated with new protection intelligence every 5 minutes.

### **Prevent leakage of confidential data via email**

Avoid deliberate or accidental data leakage via email easily and effectively with advanced content monitoring and filtering capabilities covering keywords, file types, credit card numbers, social security numbers and more.

### **Encrypt outbound email for added security**

Prevent eavesdropping and access by unintended recipients with TLS encryption, state-of-the-art technology that ensures privacy for email.

### **Protect against unknown threats before they reach the desktop**

Only Sophos Email Appliances offer you proactive Behavioral Genotype® Protection, which guards against unknown threats before they can execute and gives you all the benefits of a Host Intrusion Prevention System (HIPS) at the gateway.

### **Block offensive or unwanted content**

Maintain a safe working environment by blocking email containing offensive and unwanted content such as hate, violence and pornography. Avoid potentially serious legal liability by preventing outbound distribution as well.

### **Enforce your organization's acceptable use policy (AUP)**

Create and manage rules for inbound and outbound email quickly and easily with a powerful policy wizard. Run detailed reports and access logs from a single, highly intuitive management console.

## **Simplify administration with Sophos managed appliances**

Only Sophos appliances are managed appliances, remotely monitored by Sophos to ensure your peace of mind and confidence.
